DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Warren, Jr. et al (PN 4,650,416).

Figure 3 illustrates an array of injector rings for a gain generator combustor having within the injector coolant channels (32) where water flows for cooling, diluent channels (34) where He flows, oxidizer channels (36) where NF_3 flows and fuel channels (38) where D_2 flows, as described in the abstract and column 8 lines 3-38.

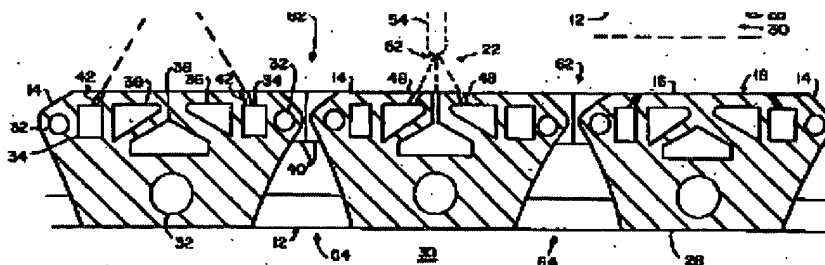

FIG. 3

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2828

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warren, Jr. et al (PN 4,650,416) in view of Huniu et al (PN 4,453,914).

Regarding claims 1 and 4,

In figure 3 Warren et al illustrates an array of injector rings for a gain generator combustor having within the injector coolant channels (32) where water flows for cooling, diluent channels (34) where He flows, oxidizer channels (36) where NF_3 flows and fuel channels (38) where D_2 flows, as described in the abstract and column 8 lines 3-38.

Regarding claims 2,3,5,6,

Warren et al is silent as to the material used for making the injectors.

Huniu et al discloses of well-known materials used for making gas injectors of gain generators among them are: inconel, stainless steel and copper. See column 1 lines 25-30.

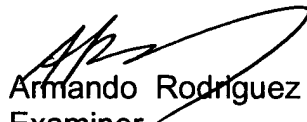

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to use any of the well-known materials to make the injectors as disclosed by Huniu et al because of the high strength provided by these materials.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Armando Rodriguez whose telephone number is (703) 308-6218. The examiner can normally be reached on 10-hour day / M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Ip can be reached on (703) 308-3098. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
